

### STATUS OF CLAIMS

1. (currently amended) An ophthalmic lens for a lens wearer, comprising a first refractive surface, wherein the geometry of the first refractive surface ~~comprising~~ comprises an optic zone having an area of distance optical power, wherein interspersed within the area of distance optical power and in a substantially spiral pattern is an area of near optical power.
2. (original) The lens of claim 1, wherein the lens is a contact lens.
3. (original) The lens of claim 2, further comprising a second refractive surface that provides cylinder power or prism power.
4. (original) The lens of claim 2, further comprising a second refractive surface that is a topographically-derived surface.
5. (original) The lens of claim 1, wherein the first refractive surface is a front surface of the lens.
6. (original) The lens of claim 2, wherein the first refractive surface is a front surface of the lens.
7. (original) The lens of claim 3, wherein the first refractive surface is a front surface of the lens and the second refractive surface is a back surface of the lens.
8. (original) The lens of claim 4, wherein the first refractive surface is a front surface of the lens and the second refractive surface is a back surface of the lens.
9. (currently amended) An ophthalmic lens for a lens wearer, comprising a first refractive surface, wherein the geometry of the first refractive surface ~~comprising~~ comprises a first optic zone having an area of distance optical power and second refractive surface having an area of plano power in a second optical zone, wherein

interspersed within the area of plano power and in a substantially spiral pattern is an area of near optical power.

10. (original) The lens of claim 9, wherein the lens is a contact lens.
11. (original) The lens of claim 10, further comprising a second refractive surface that is a topographically-derived surface.
12. (original) The lens of claim 9, wherein the first refractive surface is a front surface of the lens.
13. (original) The lens of claim 10, wherein the first refractive surface is a front surface of the lens.
14. (original) The lens of claim 11, wherein the first refractive surface is a front surface of the lens and the second refractive surface is a back surface of the lens.
